

1. What is html, its history and why it is used

HTML is hyper text mark up language which is used to communicate with the system. It is a system used to mark the text for www World Wide Web in order to obtain the information text and images as well as colors

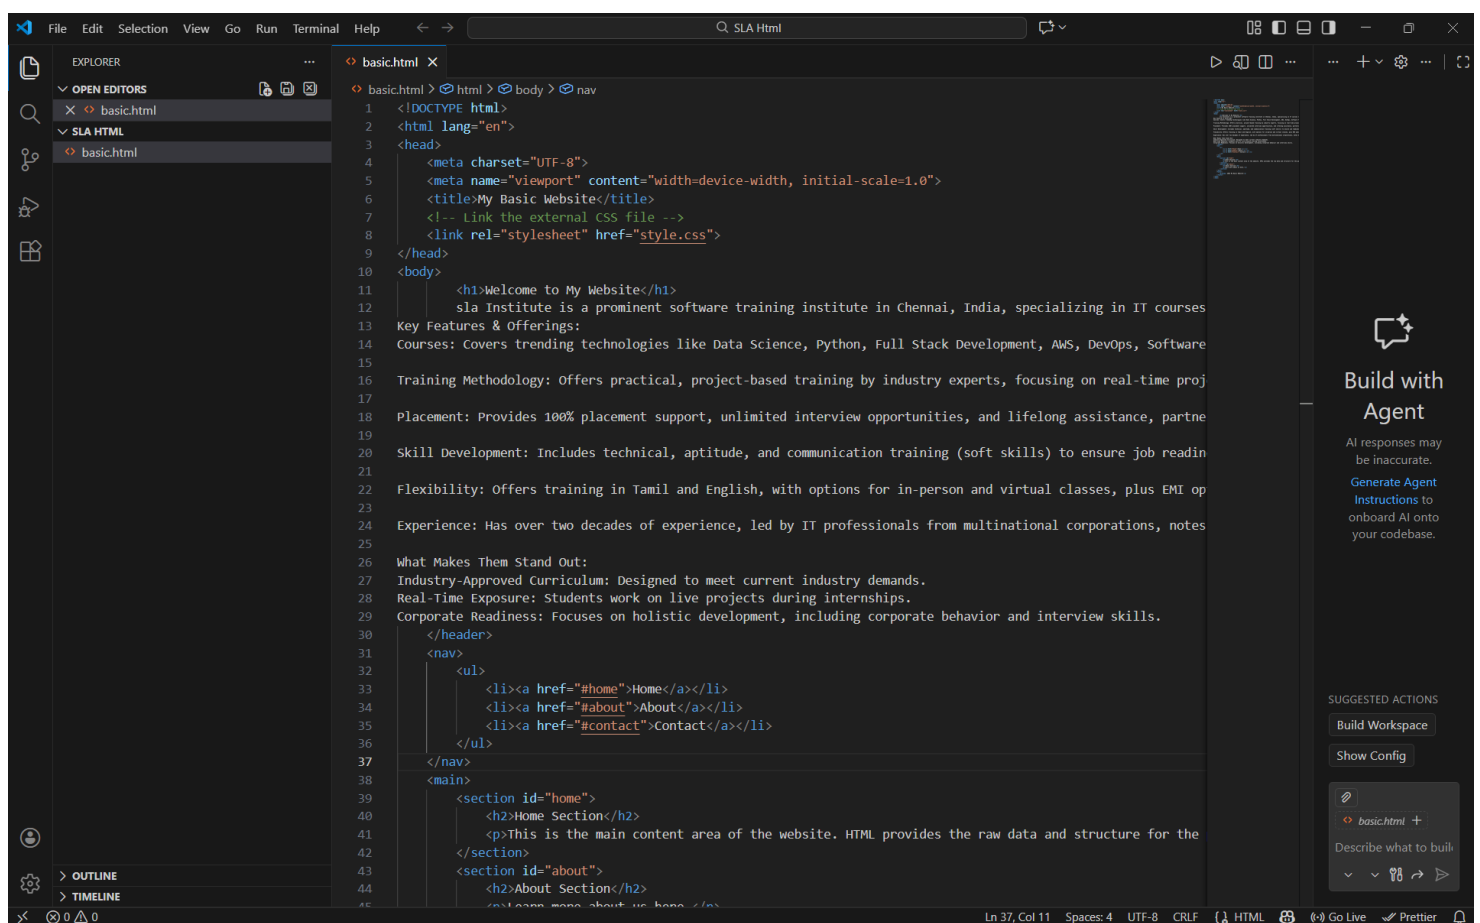

2. <!DOCTYPE html> <head> <body>

<DOCTYPE> refers to the code that is typed at the very beginning to inform the system that to render the html web page according to the current standard of website that is HTML5

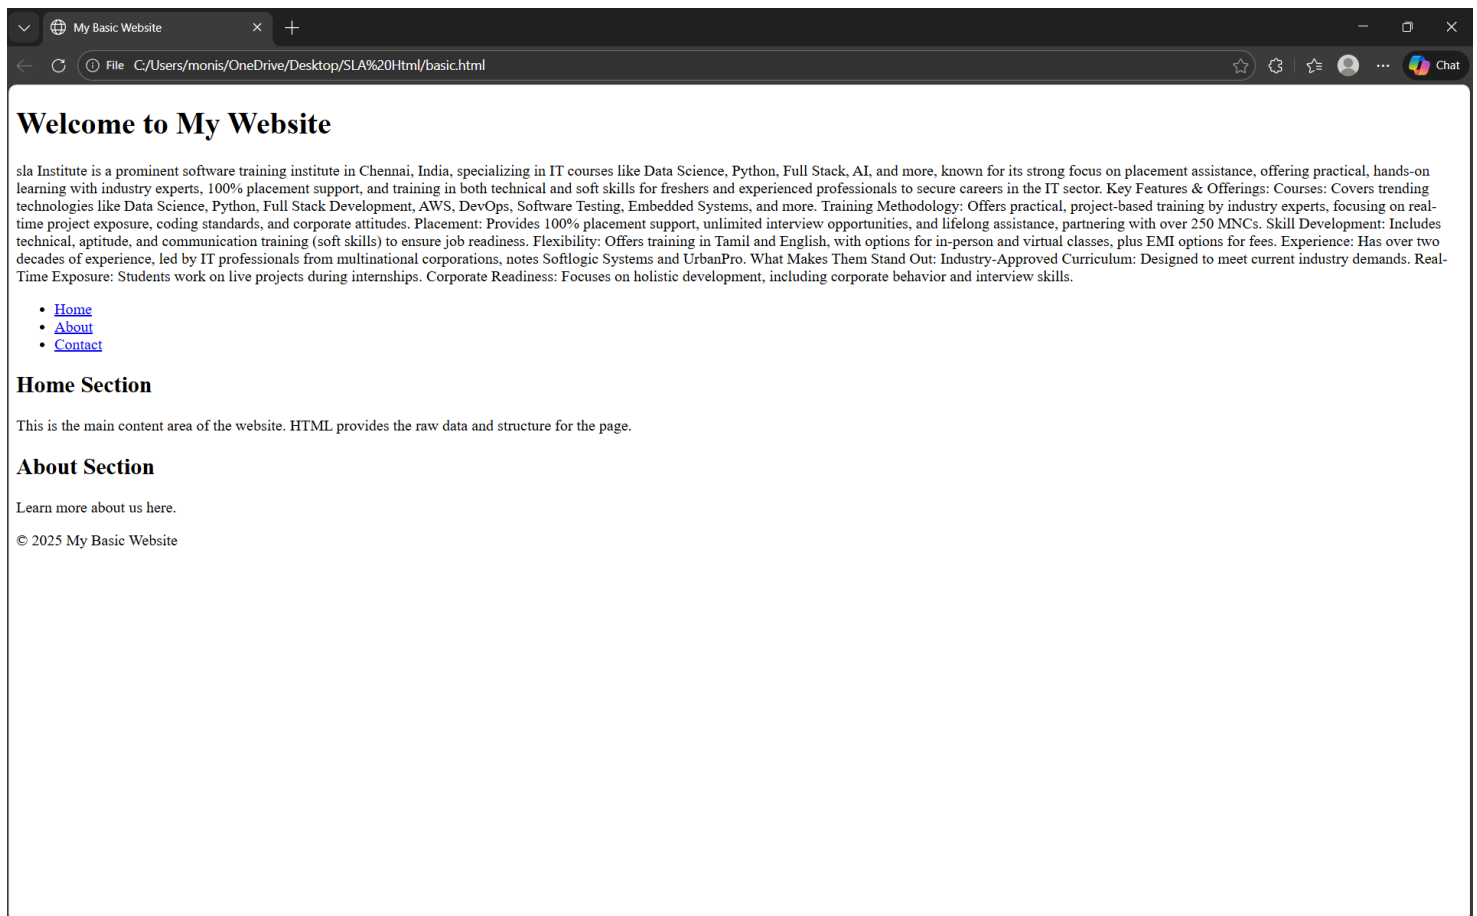

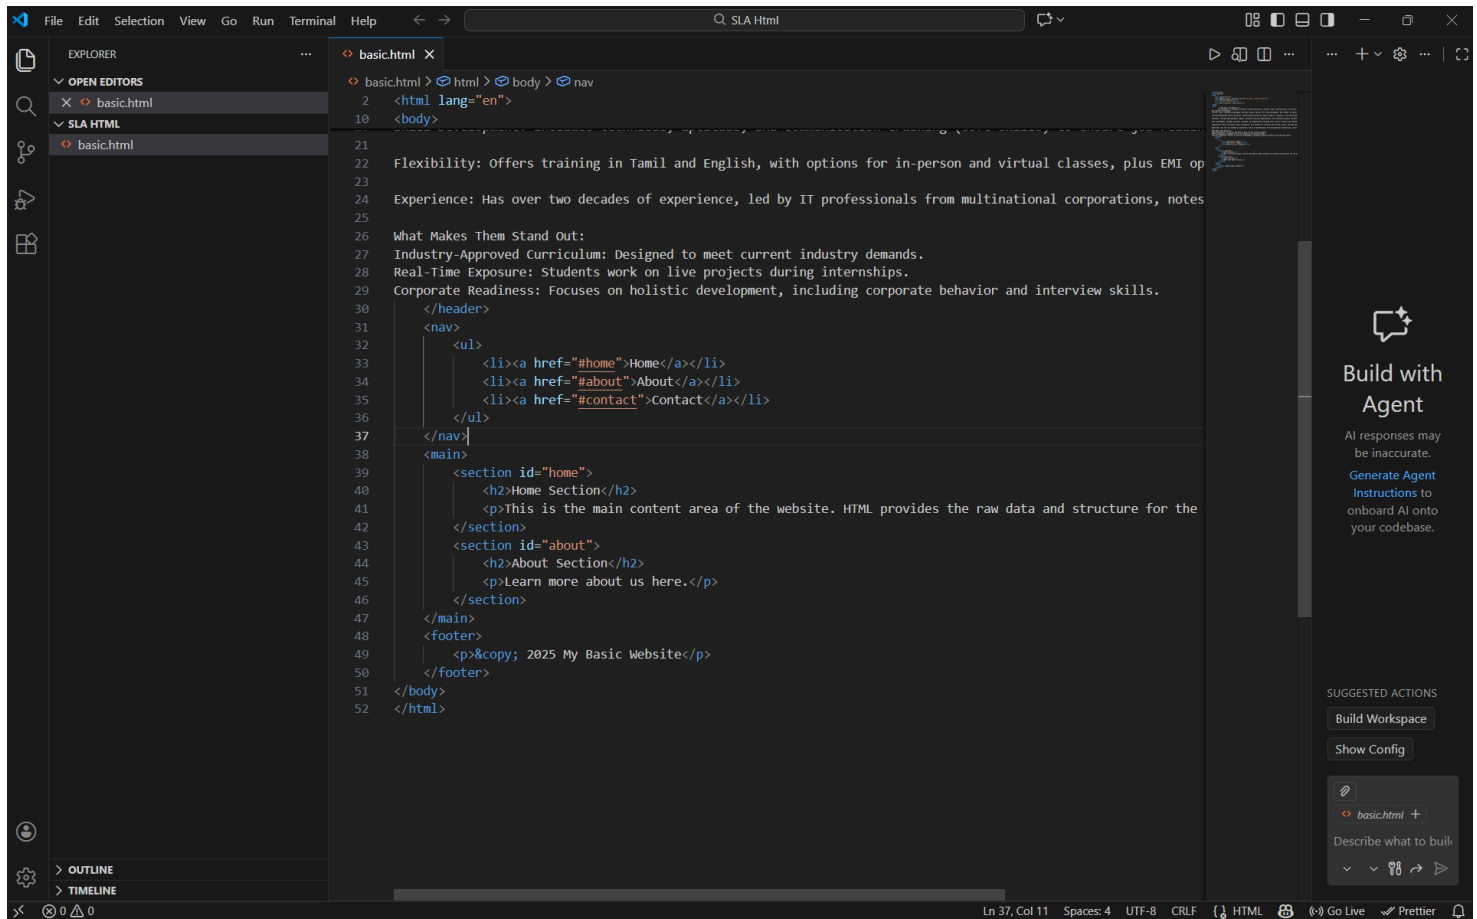

<head> consists of the meta tag, link and title of the document. As it is a container element for meta tags and the content within the <head> is not displayed in the actual web page but the essential information are provided to render the page

<body> the body element consists of the entire content that will be displayed in the web page and it is nested inside the <html> tag

3. create a basic html page

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta name="viewport" content="width=device-width, initial-scale=1.0">
6   <title>My Basic Website</title>
7   <!-- Link the external CSS file -->
8   <link rel="stylesheet" href="style.css">
9 </head>
10 <body>
11   <h1>Welcome to My Website</h1>
12   sla Institute is a prominent software training institute in Chennai, India, specializing in IT courses
13   Key Features & Offerings:

25 <nav>
26   <ul>
27     <li><a href="#home">Home</a></li>
28     <li><a href="#about">About</a></li>
29     <li><a href="#contact">Contact</a></li>
30   </ul>
31 </nav>
32 <main>
33   <section id="home">
34     <h2>Home Section</h2>
35     <p>This is the main content area of the website. HTML provides the raw data and structure for the
36   </section>
37   <section id="about">
38     <h2>About Section</h2>
39     <p>Learn more about us here.</p>
40   </section>
41 </main>
42 </body>
43 </html>
```

4. Explore the root element `<html>` . Learn how it wraps the entire document

The root element is nothing but the <html> which acts as a container element for the head body and script it declares the document type and defines the language. Example : <html language=en>

5.what are container elements? List out some of them

The container elements helps in grouping and organizing the content and also acts as an wrapper to provide html its structure and script collectively

List of container elements

<div>
