

1.learn how to use textarea for multi line input. Practice making a feedback form

Text area is used to create a text box like format which includes **rows, columns and the maximum length** that it can occupy. To use the text area for multiline input :

```
<input type="text" title="enter password" placeholder="password">(From VScode)
```

A feedback form:

A screenshot of a web browser window. The address bar shows the URL "127.0.0.1:5500/frames/formvalidation/mainpage.html". The page content includes a paragraph "This is a paragraph", followed by three input fields labeled "Username:", "Email:", and "Password:" with placeholder text "Enter your username", "Enter your email", and "Enter your password" respectively. Below these fields is a "Submit" button. At the bottom is a large text area with the placeholder text "Enter your feedback here".

This feedback form consists of:

NAME

EMAIL

PASSWORD

SUBMIT BUTTON

TEXTAREA FOR TYPING FEEDBACK

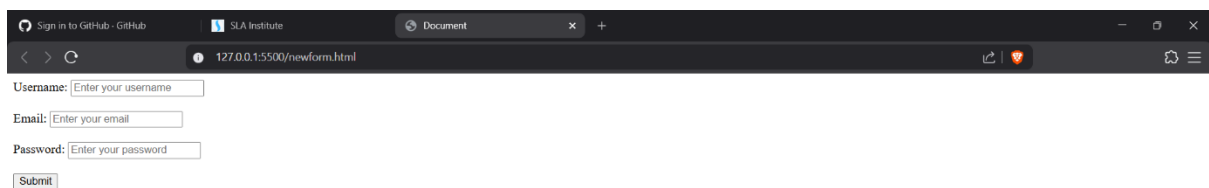

2. Use <label> for accessibility and placeholder for hints. Connect labels with inputs using for and id.

The label tag is used to identify the name of the textbox for example: **USERNAME**

ENTER HERE

THIS helps the user to access it fluently as the textbox is giving a hint to be typed in the textbox.

CONNECTING LABELS WITH INPUTS IN A FORM

A screenshot of a web browser window. The address bar shows the URL '127.0.0.1:5500/newform.html'. The page content includes a form with three input fields: 'Username: Enter your username', 'Email: Enter your email', and 'Password: Enter your password'. Below these fields is a 'Submit' button. The browser's tab bar shows three tabs: 'Sign in to GitHub · GitHub', 'SLA Institute', and 'Document'.

THE USERNAME INPUT BOX SHOWS THAT ENTER YOUR USERNAME HERE WHICH MAKES IT CLEAR THAT ONLY USER NAME SHOULD BE ENTERED THERE AND SO ON FOR THE OTHER FIELDS

3. Use required to make fields mandatory. Practice building a signup form where name, email, and password are required

The attribute required is used to make the fields mandatory and without finishing the first field say for example if the first field to be filled is username it should be completed **at first and only then a user can proceed to the next step and if a user tries to skip any it will show a popup stating that this field is mandatory**
