

1.what is javascript

JavaScript (JS) is a versatile, high-level **programming language** that is one of the core technologies of the World Wide Web, alongside HTML and CSS. It is primarily known for adding **dynamic and interactive behavior** to web pages, such as animations, form validations, and real-time content updates.

2.what is a function

A function is nothing but reusable block of code for example javascript

Key points of function

Reusable : can be used multiple times such as buttons, submit

Organized : breaking down of complex code into simpler terms

Real time example for function

- The <button> tag has an onclick attribute that calls the showAlert() JavaScript function.

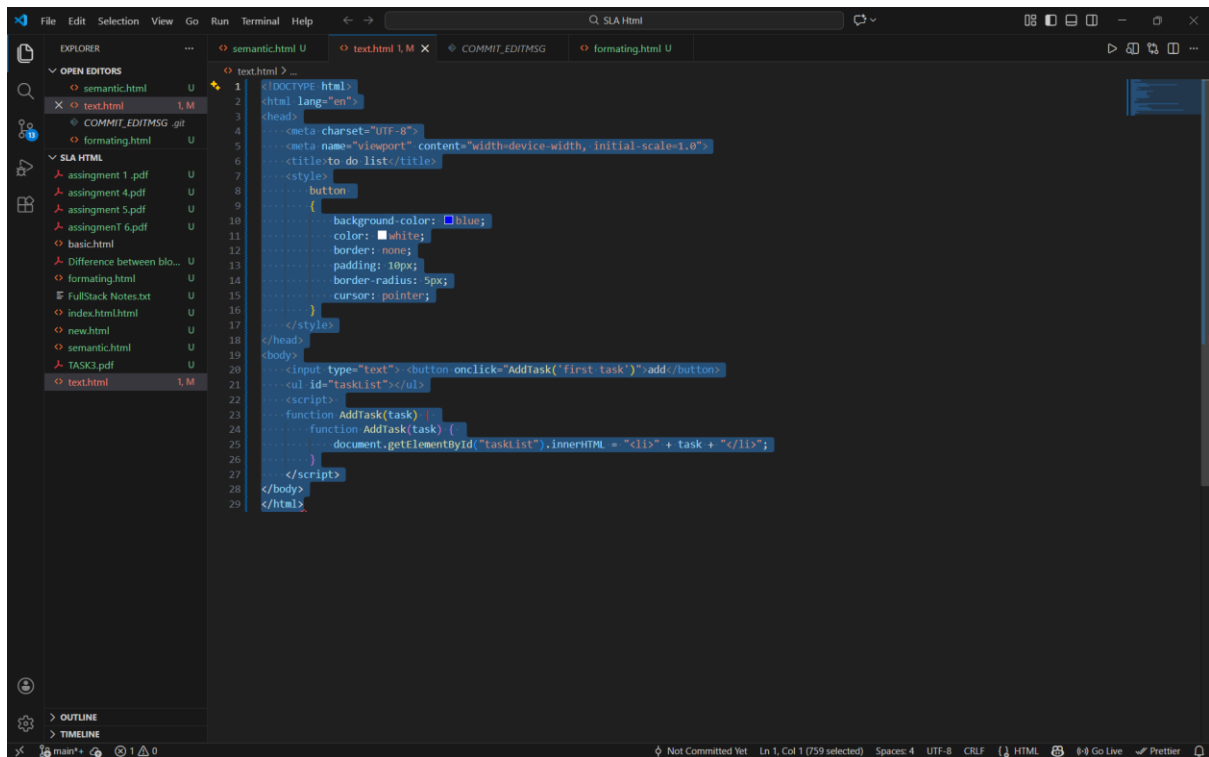

3.what is an event

An event is occurred when the user interacts with the browser to type or get certain information such as in the case of form registration ,the user tends to provide the details related to what has been asked and gets a response to that

Real time example

```
<input type="text"> <button onclick="AddTask('first task')">add</button>
```

4.basic program containing css html and js

The screenshot shows a Visual Studio Code editor window with a dark theme. The Explorer sidebar on the left shows a file tree with folders like 'SLA HTML' and 'text.html'. The main editor area displays the content of 'text.html', which is an HTML document with embedded CSS and JavaScript. The code includes a DOCTYPE declaration, HTML and head tags, a meta charset, a viewport meta tag, a title, a style tag with CSS rules for a button, a body tag with an input and a task list, and a script tag with a JavaScript function to add tasks.

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta name="viewport" content="width=device-width, initial-scale=1.0">
6   <title>do list</title>
7   <style>
8     button
9     {
10      background-color: blue;
11      color: white;
12      border: none;
13      padding: 10px;
14      border-radius: 5px;
15      cursor: pointer;
16    }
17  </style>
18 </head>
19 <body>
20   <input type="text"> <button onclick="AddTask('first task')>add /button>
21   <ul id="tasklist"></ul>
22   <script>
23     function AddTask(task) {
24       function AddTask(task) {
25         document.getElementById("tasklist").innerHTML = "<li>" + task + "</li>";
26       }
27     </script>
28 </body>
29 </html>
```
